

WHO WILL ESCAPE?

These three prisoners have broken out of their cells on St Helena Island. They climb the stockade wall and run for the beach. Two of them will be caught by the guard. **One** man will reach the water. Who will it be? *Trace their paths to find out.*

So the prisoner reaches the water's edge and sees the mainland several kilometres in the distance.

1. What might he do next to complete his escape?
2. What might go wrong?
3. How would you rate his chances of success on a scale of 1 to 5... where 1 means 'very little chance of success' and 5 means 'will be successful'?
